

Empirical likelihood bibliography

Art B. Owen
owen@stat.stanford.edu

May 2000

This is a collection of published references on empirical likelihood. Articles were selected if they cited a paper on empirical likelihood, or if they had empirical likelihood in the title or as a key word.

Please bring any other relevant publications to my attention. I'm especially interested in

1. publications in econometrics
2. publications in medicine
3. dissertations
4. technical reports

because the sources I checked don't cover those areas. The articles don't necessarily have to cite an empirical likelihood paper, or have empirical likelihood as a keyword. It would help to have a short note explaining the connection to empirical likelihood.

I do know of some technical reports and dissertations, and I'll add these to the list at a later stage.

Many of these citations were obtained from the Current Index to Statistics.
